

## Data binding and modifiers

Step 1: from **book-list.update.php**,

```
<form>
  <span class="mr-2">Your Name: </span>
  <input type="text" wire:model="name">
  <button wire:click.prevent="$refresh">Update</button>
</form>
```

Step 2: Now it will automatically trigger the **\$name**, from BookList.php,

```
public $name = "Mario";
```

- **\$refresh** er kaj hocche jei data ta change hocche shetar update kore dewar jonno, works same as vue.js but two way binding e extra refresh pattern add kora lage.

With from type:

```
<form wire:submit.prevent="$refresh">
  <span class="mr-2">Your Name: </span>
  <input type="text" wire:model="name">
  <button type="submit">Update</button>
</form>
```

**Step 2:** works same as **vue** binding, this works auto,

```
<form>
  <span class="mr-2">Your Name: </span>
  <input type="text" wire:model.live="name">
</form>
```

Change data with fixed time automatically:

```
<form>
  <span class="mr-2">Your Name: </span>
  <input type="text" wire:model.live.debounce.200ms="name">
  <button type="submit">Update</button>
</form>
```
